

Workday End-User Training

Better Software • Better Training • Better Performance

Traditional ERP training is based on the go-live event and the work required to help users work with complex and unfriendly software. Traditional ERP training is also typically developed using outdated development processes, delivered using outdated methods, and designed with little focus on maintainability and sustainability.

Walker Strategy Associates' Workday end-user training solutions harness the power of Workday innovation.

How Workday is Different

WSA End-User Training Solutions Support this Difference

Thrive vs. Survive

Supports a sustainable business process

- Describes the end-to-end business process
- Incorporates system, non-system, & cross-application steps
- Clearly delineates business benefits and advantages

Focuses on how the business process supports a better way of working

- Identifies key benefits
- Demonstrates dashboards, views, and reports
- Describes system capability vs. system requirements

Cloud-based

Zero footprint

- No software, infrastructure, or IT support required
- Context-sensitive, cloud-based content delivery

Cloud-based processes for development, approval, delivery, tracking, and reporting

Maintainable & Sustainable

Developed with innovation in mind

- Supports ongoing Workday releases
- Adaptable as you extend Workday functionality to new areas
- Leverages rapid-development tools for ease of development and maintenance
- Cross-application support framework allows extension to other business areas/applications

Maintenance and sustainment are an integral part of solution design
